

Operational Flexibility

The BAE SYSTEMS F-9120, 3 Field of View, Dual Band Sensor gives great operational flexibility advantages:

- Eliminates mission specific pod changes
- Allows preplanning of all mission/target types
- Allows real-time, in-flight mission retasking

Ground Station Interpretability is Greatly Enhanced

Within each of the three fields of view the focal lengths in EO and IR are matched to ensure the resulting image in each field of view is of the same scale. During the image interpretation process the interpreter can overlay the EO and IR images of the target area to enhance greatly equipment detection and recognition.
