

**RADIATION-HARDENED.
RADIATION-PROTECTED.**

BAE Systems designed its radiation-hardened, 16-megabit SRAM module for exceptionally harsh radiation environments. Based on technology deployed on more than 300 satellites, these high-speed, low-power chips are available in various memory densities and package options. Our design expertise means better protection, durability, and reliability in space and wherever high radiation levels are present. It's another way we provide real advantage.

BAE SYSTEMS

REAL PERFORMANCE. REAL ADVANTAGE.
