

2-D Bar Code Program

Supplier Guidelines

June 2009

Requirements – Using the Supplier's System

- 2-D bar code labels must be created for every item shipped to BAE Systems.
- Labels can be produced with the supplier's internal system, as long as they include all required information.
- Labels produced on a supplier's system must be approved by the Receiving Supervisor prior to use.
- Note: Actual label size is left to the discretion of the supplier.

PO: 123456
LINE ITEM: 1
PART NUMBER: 12345666P123
PART DESCRIPTION:
QUANTITY: 1

Requirements – Using the BAE Systems Generator

- Suppliers can also use the 2-D bar code generator available to BAE Systems suppliers at:
<http://barcode.eis.na.baesystems.com/barcode/barcode.html>
or refer to your purchase order for this link.
- A Java update may be required. If so, please refer to the Java website under downloads.
- Actual label size is left to the discretion of the supplier.

Online 2-D bar code generator

- Enter the PO number ONLY in the Purchase Order Number field, with no extra characters.
- The part number must be stated in either the Part Number or the Part Description field but not both.

The screenshot shows a web form titled "PDF417 BARCODE GENERATOR" with the BAE SYSTEMS logo in the top left. A link for "BAE Systems NA Home Page" is in the top right. The form contains five input fields: "Purchase Order Number:", "Line Item Number:", "Part Number:", "Part Description:", and "Quantity:". Below the fields are two buttons: "GENERATE LABEL" and "RESET". A note at the bottom states: "Note: The barcode image is designed to be painted as the page loads and may not refresh properly on all browsers. Browser must have Javascript to support this program."

Packaging / Shipping requirements

- Affix bar code labels to the outside of every shipment box. This will ensure a more efficient receipt and invoice payment.
- Attach the packing slip and invoice in a pack list “blister” envelope on the outside of the box for all items in the package.
- If more than one PO is contained in a shipment multiple labels can be affixed to the outside of the box if space permits, or the balance may be included with the packing slip and invoices, in the “blister” envelope on the outside of the box for all items in the package.

Got Questions?

For questions please contact:
