

BAE SYSTEMS Submarines Drawing Office/ Computer Aided Design (CAD) departments provide highly efficient technical support services. Working from documentation, CAD data or modelling systems, they capture and precisely define customer requirements to ensure that the end products are fit for purpose and competitively priced.

Design

In support of the pipe fabrication process, the Design and Drawing Office teams are responsible for the production of pipework data such as bills of materials, bending data, installation instructions and drawings and manufacturing production drawings. The information generated ranges from extremely accurate isometric drawings to the electronic data necessary for driving the most advanced Computerised Numerically Controlled (CNC) bending machines.

Product accuracy is assured by high-quality configuration check data used in final inspection.
